Europe: asparagus, cardoon, dianthus, horseradish, sorrel

North America: strawberrytomatillo

South America: potato

red font - annuals that will reseed or lend themselves to seed saving

The original purpose of this garden is to showcase edible plants that are perennial in Minnesota. Watch through the years as additional plants are added and as we discover which plants are truly hardy. Although many woody plants fit the criteria of edible perennials, we are unable to accomodate most of them due to space restrictions. In your own perennial garden, consider fruit trees and shrubs, many herbs (showcased elsewhere), and even fungi.
